Augmented Reality for Picking Training Course

Professional Development Training Course Outline

Category	Logistics and Supply Chain Management	**Duration**	5 Days
Base Fee	$1,500 USD	**Delivery Mode**	Online / On-site Hybrid

Course Introduction

The rapid adoption of augmented reality (AR) technologies in logistics and warehousing has transformed operational efficiency, accuracy, and worker productivity. Augmented Reality for Picking Training Course empowers warehouse personnel and supply chain managers to leverage AR-enabled devices and systems to optimize inventory picking, reduce errors, and improve fulfillment times. This course integrates hands-on simulations, real-world case studies, and interactive learning modules to provide participants with the skills and knowledge necessary to implement AR solutions in modern warehouse operations. Emphasis is placed on the use of wearable AR devices, smart glasses, and AR software platforms to enhance picking accuracy, streamline order fulfillment, and ensure seamless integration with warehouse management systems.

Participants will gain practical exposure to AR-driven picking processes, including order identification, route optimization, real-time inventory tracking, and error reduction techniques. The course covers emerging trends in AR logistics, best practices for deployment, and performance monitoring strategies. By focusing on technology adoption and workforce adaptation, this training equips organizations to maintain competitive advantage, reduce operational costs, and increase customer satisfaction. Additionally, the course highlights safety considerations, ergonomics, and change management principles critical for successful AR implementation in warehouse environments.

Programme Curriculum
