

Bioinformatics in Veterinary Science Training Course

Professional Development Training Course Outline

Category	Veterinary and Animal Science	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Bioinformatics in Veterinary Science is revolutionizing animal healthcare, diagnostics, and disease prevention. This cutting-edge training course equips professionals with advanced computational tools, genomic analytics, and molecular modeling techniques to enhance veterinary research and clinical applications. Participants will learn to integrate big data analysis, precision medicine approaches, and predictive modeling to drive evidence-based interventions in animal health. With the rise of genomics, proteomics, and metagenomics, this course prepares veterinarians, researchers, and animal health specialists to leverage bioinformatics for better disease management and productivity improvements.

Bioinformatics in Veterinary Science Training Course emphasizes practical applications of bioinformatics, combining theoretical insights with hands-on training in next-generation sequencing (NGS), genome annotation, and pathogen surveillance. Case studies from companion animals, livestock, and wildlife will illustrate real-world solutions, enabling participants to interpret complex datasets, design diagnostic strategies, and contribute to research innovations. By the end of the program, learners will possess the skills to transform veterinary data into actionable intelligence, optimizing animal health outcomes and advancing the field of veterinary genomics.

Programme Curriculum

Bioinformatics in Veterinary Science Training Course

Introduction

Bioinformatics in Veterinary Science is revolutionizing animal healthcare, diagnostics, and disease prevention. This cutting-edge training course equips professionals with advanced computational tools, genomic analytics, and molecular modeling techniques to enhance veterinary research and clinical applications. Participants will

learn to integrate big data analysis, precision medicine approaches, and predictive modeling to drive evidence-based interventions in animal health. With the rise of genomics, proteomics, and metagenomics, this course prepares veterinarians, researchers, and animal health specialists to leverage bioinformatics for better disease management and productivity improvements.

Bioinformatics in Veterinary Science Training Course emphasizes practical applications of bioinformatics, combining theoretical insights with hands-on training in next-generation sequencing (NGS), genome annotation, and pathogen surveillance. Case studies from companion animals, livestock, and wildlife will illustrate real-world solutions, enabling participants to interpret complex datasets, design diagnostic strategies, and contribute to research innovations. By the end of the program, learners will possess the skills to transform veterinary data into actionable intelligence, optimizing animal health outcomes and advancing the field of veterinary genomics.

Course Duration

5 days

Course Objectives

1. Master genomic and proteomic data analysis in veterinary species.
2. Apply next-generation sequencing (NGS) for disease diagnosis.
3. Integrate bioinformatics tools in veterinary clinical decision-making.
4. Explore comparative genomics across companion and farm animals.
5. Utilize molecular modeling for drug discovery in veterinary medicine.
6. Implement metagenomics for microbiome and pathogen studies.
7. Conduct phylogenetic and evolutionary analyses of animal pathogens.
8. Harness big data analytics for veterinary epidemiology.
9. Develop predictive models for zoonotic disease surveillance.
10. Perform genome annotation and variant analysis for breeding programs.
11. Leverage bioinformatics pipelines for vaccine and therapeutics design.
12. Interpret multi-omics data for precision veterinary medicine.
13. Design evidence-based research protocols using computational tools.

Target Audience

1. Veterinarians and clinical practitioners
2. Veterinary researchers and scientists
3. Animal health diagnosticians
4. Livestock and poultry farm managers
5. Wildlife and conservation biologists
6. Veterinary students and interns
7. Genomics and bioinformatics professionals
8. Pharmaceutical and biotech industry specialists

Course Modules

Module 1: Introduction to Veterinary Bioinformatics

- Overview of bioinformatics in veterinary medicine
- Key databases: GenBank, Ensembl, UniProt
- Introduction to NGS and omics technologies
- Data curation and management strategies

- Case Study: Genomic mapping of canine hereditary disorders

Module 2: Genomics and Genome Annotation

- Genome assembly and annotation tools
- Comparative genomics across species
- Identifying SNPs and structural variants
- Functional genomics and gene prediction
- Case Study: Cattle genome annotation for disease resistance

Module 3: Proteomics and Molecular Modeling

- Protein structure prediction and analysis
- Molecular docking for veterinary drug discovery
- Protein-protein interaction networks
- In-silico modeling of pathogen proteins
- Case Study: Antimicrobial target identification in poultry pathogens

Module 4: Next-Generation Sequencing (NGS) Applications

- NGS workflows and quality control
- RNA-seq and transcriptomics in animals
- Variant calling and functional analysis
- Integrating multi-omics data
- Case Study: Avian influenza virus detection using NGS

Module 5: Metagenomics and Microbiome Analysis

- Microbiome sequencing techniques
- Pathogen discovery in livestock
- Metagenomic data interpretation
- Host-pathogen interaction studies
- Case Study: Gut microbiome profiling in dairy cattle

Module 6: Phylogenetics and Evolutionary Analysis

- Building phylogenetic trees
- Molecular evolution and comparative analysis
- Tracking disease outbreaks with evolutionary tools
- Software: MEGA, PhyML, BEAST
- Case Study: Rabies virus phylogenetic mapping in wildlife

Module 7: Big Data and Predictive Analytics

- Machine learning in veterinary research
- Predictive modeling for disease outbreaks
- Data visualization and interpretation
- Risk assessment in epidemiology
- Case Study: Predicting mastitis outbreaks in dairy herds

Module 8: Applied Bioinformatics in Veterinary Medicine

- Integrating omics for precision veterinary care

- Vaccine design and immunoinformatics
- Antimicrobial resistance tracking
- Clinical decision support systems
- Case Study: Designing a multi-epitope vaccine for canine parvovirus

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
------------	----------	----------	-------

21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
