Haulage Systems in Mining Training Course

Professional Development Training Course Outline

Category	General Training	**Duration**	5 Days
Base Fee	$1,500 USD	**Delivery Mode**	Online / On-site Hybrid

Course Introduction

The Haulage Systems in Mining Training Course is designed to equip learners with advanced knowledge of mining transportation systems, materials handling, load-haul-dump (LHD) operations, conveyor systems, and underground and surface haulage logistics. Modern mining operations rely heavily on efficient ore transport systems, dump truck cycles, shuttle cars, rail systems, and conveyor optimization strategies to improve productivity, reduce downtime, and enhance safety compliance. This course delivers practical and theoretical expertise aligned with mining automation, digital fleet management, and operational efficiency standards used in contemporary mining environments.

In today’s competitive mining sector, optimizing haulage efficiency, fuel consumption, cycle time reduction, and equipment utilization is critical for profitability and sustainability. This training integrates risk management, safety protocols, maintenance planning, and production optimization techniques to ensure learners can manage complex haulage networks in both surface and underground mining operations. It prepares participants to adapt to emerging trends such as autonomous haul trucks, AI-driven dispatch systems, and smart mining logistics platforms, making it essential for modern mining professionals.

Programme Curriculum

Haulage Systems in Mining Training Course

Introduction

The Haulage Systems in Mining Training Course is designed to equip learners with advanced knowledge of mining transportation systems, materials handling, load-haul-dump (LHD) operations, conveyor systems, and underground and surface haulage logistics. Modern mining operations rely heavily on efficient ore transport systems, dump truck cycles, shuttle cars, rail systems, and conveyor optimization strategies to improve productivity, reduce downtime, and enhance safety compliance. This course delivers practical and theoretical expertise aligned with mining automation, digital fleet management, and operational efficiency standards used

in contemporary mining environments.

In today's competitive mining sector, optimizing haulage efficiency, fuel consumption, cycle time reduction, and equipment utilization is critical for profitability and sustainability. This training integrates risk management, safety protocols, maintenance planning, and production optimization techniques to ensure learners can manage complex haulage networks in both surface and underground mining operations. It prepares participants to adapt to emerging trends such as autonomous haul trucks, AI-driven dispatch systems, and smart mining logistics platforms, making it essential for modern mining professionals.

Course Duration

5 days

Course Objectives

1. Master mining haulage systems design and operations
2. Optimize load-haul-dump (LHD) productivity cycles
3. Understand underground and surface transport logistics
4. Apply fleet management and dispatch optimization systems
5. Improve cycle time reduction and productivity efficiency
6. Implement conveyor belt system operations and maintenance
7. Enhance mine safety and risk mitigation in haulage operations
8. Analyze ore transportation and material flow systems
9. Develop skills in equipment utilization and performance tracking
10. Integrate autonomous haulage and smart mining technologies
11. Apply preventive and predictive maintenance strategies
12. Manage fuel efficiency and cost reduction in haulage fleets
13. Ensure compliance with mining operational safety regulations

Target Audience

1. Mining engineers and metallurgical engineers
2. Haulage and logistics supervisors
3. Underground and surface mine operators
4. Equipment operators (dump trucks, LHD, loaders)
5. Mining safety officers and HSE professionals
6. Maintenance planners and mechanical technicians
7. Mining operations managers and planners
8. Students and graduates in mining engineering

Course Modules

Module 1: Fundamentals of Mining Haulage Systems

- Overview of mining transport systems
- Surface vs underground haulage comparison
- Equipment types
- Ore flow and material handling basics
- Case Study: Efficiency improvement in an open-pit truck fleet reducing cycle time by 18%

Module 2: Load, Haul, Dump (LHD) Operations

- LHD operational principles
- Productivity optimization techniques
- Underground navigation systems
- Payload management and safety controls
- Case Study: LHD automation increasing output in a platinum mine

Module 3: Conveyor Systems in Mining

- Conveyor design and layout
- Belt tension and alignment control
- Transfer stations and chute design
- Maintenance and failure prevention
- Case Study: Conveyor downtime reduction in a coal mine operation

Module 4: Fleet Management and Dispatch Systems

- Real-time fleet monitoring
- GPS and telemetry systems
- Dispatch optimization algorithms
- Queue and cycle management
- Case Study: Smart dispatch system improving haulage efficiency by 25%

Module 5: Underground Haulage Systems

- Rail systems and ore skips
- Shaft hoisting operations
- Ventilation and safety integration
- Underground logistics planning
- Case Study: Deep-level mine transport optimization reducing delays

Module 6: Surface Mining Haulage Operations

- Dump truck cycle management
- Road design and maintenance
- Loading and dumping optimization
- Fuel consumption control
- Case Study: Open-pit mine reducing fuel costs through route optimization

Module 7: Maintenance and Reliability Engineering

- Preventive maintenance scheduling
- Predictive analytics in mining equipment
- Breakdown management systems
- Spare parts logistics
- Case Study: Increased equipment uptime through predictive maintenance in iron ore mining

Module 8: Automation and Smart Mining Technologies

- Autonomous haul trucks
- AI-based decision systems
- Digital twin mining logistics
- IoT sensors in haulage systems

- Case Study: Fully autonomous haulage fleet implementation in a large-scale mine

Training Methodology

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call *+254769199797*

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

a. The participant must be conversant with English.

b. Upon completion of training the participant will be issued with an Authorized Training Certificate

c. Course duration is flexible and the contents can be modified to fit any number of days.

d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.

e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
23 Nov 2026	27 Nov 2026	Online	$1,000
23 Nov 2026	27 Nov 2026	Physical	$1,500

Start Date	End Date	Location	Price
23 Nov 2026	27 Nov 2026	Physical	$3,000
23 Nov 2026	27 Nov 2026	Physical	$3,000
23 Nov 2026	27 Nov 2026	Physical	$6,000
23 Nov 2026	27 Nov 2026	Physical	$4,500
23 Nov 2026	27 Nov 2026	Physical	$6,000
23 Nov 2026	27 Nov 2026	Physical	$6,000
