

Maintenance Engineering Strategy in Manufacturing Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today’s rapidly evolving Industry 4.0 manufacturing ecosystem, maintenance engineering has transformed from reactive troubleshooting to a strategic, data-driven discipline. Modern plants rely on predictive maintenance, reliability-centered maintenance (RCM), Total Productive Maintenance (TPM), and Industrial IoT (IIoT) to maximize uptime, reduce operational costs, and extend asset lifecycle. Maintenance Engineering Strategy in Manufacturing Training Course equips professionals with advanced frameworks to build a resilient maintenance engineering strategy aligned with smart manufacturing and digital transformation goals.

As manufacturing systems become increasingly automated and interconnected, the demand for asset reliability, condition monitoring, failure prediction, and OEE optimization continues to grow. This course delivers practical and strategic knowledge on CMMS integration, root cause analysis (RCA), vibration analysis, FMEA, and lean maintenance systems, enabling organizations to achieve world-class performance, minimize downtime, and improve production efficiency through data-driven maintenance decision-making.

Programme Curriculum

Maintenance Engineering Strategy in Manufacturing Training Course

Introduction

In today’s rapidly evolving Industry 4.0 manufacturing ecosystem, maintenance engineering has transformed from reactive troubleshooting to a strategic, data-driven discipline. Modern plants rely on predictive maintenance, reliability-centered maintenance (RCM), Total Productive Maintenance (TPM), and Industrial IoT (IIoT) to maximize uptime, reduce operational costs, and extend asset lifecycle. Maintenance Engineering Strategy in Manufacturing Training Course equips professionals with advanced frameworks to build a resilient

maintenance engineering strategy aligned with smart manufacturing and digital transformation goals.

As manufacturing systems become increasingly automated and interconnected, the demand for asset reliability, condition monitoring, failure prediction, and OEE optimization continues to grow. This course delivers practical and strategic knowledge on CMMS integration, root cause analysis (RCA), vibration analysis, FMEA, and lean maintenance systems, enabling organizations to achieve world-class performance, minimize downtime, and improve production efficiency through data-driven maintenance decision-making.

Course Duration

5 days

Course Objectives

1. Understand Industry 4.0 maintenance strategy frameworks
2. Implement Predictive Maintenance (PdM) and Condition-Based Monitoring
3. Apply Reliability-Centered Maintenance (RCM) methodologies
4. Improve Overall Equipment Effectiveness (OEE)
5. Develop effective Total Productive Maintenance (TPM) systems
6. Conduct advanced Root Cause Analysis (RCA)
7. Master Failure Modes and Effects Analysis (FMEA)
8. Optimize asset lifecycle management strategies
9. Integrate CMMS (Computerized Maintenance Management Systems)
10. Use IIoT sensors for real-time monitoring
11. Reduce downtime through proactive maintenance planning
12. Enhance energy efficiency and cost optimization in maintenance
13. Build a data-driven smart factory maintenance strategy

Target Audience

1. Maintenance Engineers
2. Plant Managers
3. Reliability Engineers
4. Production Supervisors
5. Industrial Engineers
6. Operations Managers
7. Mechanical/Electrical Technicians
8. Asset Management Professionals

Course Modules

Module 1: Foundations of Modern Maintenance Engineering

- Evolution from reactive to predictive maintenance
- Role of maintenance in smart manufacturing systems
- Introduction to Industry 4.0 and digital maintenance
- Key KPIs: MTBF, MTTR, OEE
- Maintenance strategy alignment with production goals
- **Case Study:** A food processing plant reduces breakdowns by 35% after shifting from reactive to preventive maintenance strategy.

Module 2: Predictive Maintenance & Condition Monitoring

- Principles of predictive maintenance (PdM)
- Vibration, thermal, and oil analysis techniques
- Sensor-based condition monitoring systems
- Data interpretation for failure prediction
- Integration with AI and machine learning models
- **Case Study:** A cement plant uses vibration analytics to predict bearing failure and saves \$250,000 annually in downtime costs.

Module 3: Reliability-Centered Maintenance (RCM)

- RCM decision-making framework
- Critical asset identification techniques
- Functional failure analysis
- Maintenance task optimization
- Risk-based maintenance prioritization
- **Case Study:** An automotive manufacturer improves uptime by 28% using RCM-based critical asset classification.

Module 4: Total Productive Maintenance (TPM)

- Pillars of TPM implementation
- Autonomous maintenance by operators
- Planned maintenance scheduling systems
- Continuous improvement (Kaizen) integration
- Elimination of chronic equipment losses
- **Case Study:** A textile company increases OEE from 62% to 81% through TPM deployment.

Module 5: Root Cause Analysis & Failure Investigation

- RCA methodologies (5 Whys, Fishbone, Pareto)
- Data-driven failure investigation
- Human, mechanical, and system failure analysis
- Corrective and preventive action planning
- Documentation and reporting standards
- **Case Study:** A steel plant reduces recurring conveyor failures by 40% using structured RCA techniques.

Module 6: CMMS & Digital Maintenance Systems

- CMMS architecture and functionalities
- Work order management automation
- Spare parts inventory optimization
- Integration with IoT and ERP systems
- Digital dashboards and reporting tools
- **Case Study:** A pharmaceutical company reduces maintenance response time by 50% using CMMS automation.

Module 7: Asset Lifecycle & Reliability Optimization

- Asset lifecycle cost analysis
- Maintenance planning across equipment lifespan
- Reliability engineering fundamentals

- Failure mode prediction models
- Optimization of replacement vs repair decisions
- **Case Study:** An energy plant extends turbine lifecycle by 6 years using lifecycle optimization models.

Module 8: Smart Factory Maintenance & Industry 4.0 Integration

- IIoT-enabled maintenance systems
- Digital twin applications in maintenance
- AI-driven predictive analytics
- Cloud-based maintenance ecosystems
- Cyber-physical system integration
- **Case Study:** A smart manufacturing facility reduces unplanned downtime by 45% using digital twin simulation.

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
