

Marine Wildlife Health Training Course

Professional Development Training Course Outline

Category	Veterinary and Animal Science	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Marine Wildlife Health Training Course is designed to empower professionals, researchers, and conservationists with cutting-edge knowledge and practical skills in marine animal health management. Participants will gain expertise in wildlife disease diagnostics, marine veterinary medicine, conservation strategies, and ecosystem health monitoring, fostering a holistic understanding of marine biodiversity protection. This training is ideal for those seeking to address the growing challenges in ocean conservation, marine pollution mitigation, and wildlife rehabilitation.

With a focus on hands-on learning, evidence-based practices, and real-world case studies, the course bridges the gap between theoretical knowledge and practical application. Participants will develop competencies in disease surveillance, rescue operations, health assessment techniques, and ecosystem risk analysis, making them capable of implementing effective strategies for marine wildlife health and sustainability. The curriculum integrates emerging technologies, climate impact analysis, and One Health approaches, ensuring that learners are prepared to tackle the complex issues affecting marine ecosystems today.

Programme Curriculum

Marine Wildlife Health Training Course

Introduction

Marine Wildlife Health Training Course is designed to empower professionals, researchers, and conservationists with cutting-edge knowledge and practical skills in marine animal health management. Participants will gain expertise in wildlife disease diagnostics, marine veterinary medicine, conservation strategies, and ecosystem health monitoring, fostering a holistic understanding of marine biodiversity protection. This training is ideal for those seeking to address the growing challenges in ocean conservation, marine

pollution mitigation, and wildlife rehabilitation.

With a focus on hands-on learning, evidence-based practices, and real-world case studies, the course bridges the gap between theoretical knowledge and practical application. Participants will develop competencies in disease surveillance, rescue operations, health assessment techniques, and ecosystem risk analysis, making them capable of implementing effective strategies for marine wildlife health and sustainability. The curriculum integrates emerging technologies, climate impact analysis, and One Health approaches, ensuring that learners are prepared to tackle the complex issues affecting marine ecosystems today.

Course Duration

5 days

Course Objectives

By the end of this course, participants will be able to:

1. Identify and diagnose common marine wildlife diseases.
2. Apply veterinary health interventions for endangered species.
3. Conduct effective ecosystem and habitat health assessments.
4. Implement wildlife rescue and rehabilitation protocols.
5. Monitor and mitigate marine pollution impacts on wildlife health.
6. Apply One Health principles to marine and coastal ecosystems.
7. Utilize GIS and remote sensing tools for marine health monitoring.
8. Develop disease surveillance and outbreak response strategies.
9. Conduct research and data analysis for marine conservation projects.
10. Implement climate change adaptation strategies for marine species.
11. Design and evaluate community engagement and awareness programs.
12. Apply ethical practices in wildlife handling and veterinary care.
13. Produce professional reports and action plans for marine conservation policy.

Target Audience

1. Marine biologists and ecologists
2. Wildlife veterinarians and veterinary students
3. Conservation and environmental NGO professionals
4. Oceanographers and aquatic researchers
5. Environmental policy makers and regulators
6. Aquaculture and fisheries managers
7. Wildlife rescue and rehabilitation center staff
8. Graduate students in marine or environmental sciences

Course Modules

Module 1: Marine Wildlife Health Fundamentals

- Overview of marine biodiversity and ecosystem services
- Marine species anatomy and physiology
- Common diseases in marine mammals, turtles, and seabirds
- Diagnostic tools and laboratory techniques
- Case Study: Disease outbreak management in sea turtles

Module 2: Disease Surveillance and Epidemiology

- Epidemiology of marine wildlife diseases
- Sample collection and laboratory processing
- Data analysis for disease trends
- Risk assessment of emerging pathogens
- Case Study: Viral outbreak in coastal seal populations

Module 3: Wildlife Rescue and Rehabilitation

- Standard operating procedures for rescue operations
- Emergency care and triage for marine animals
- Rehabilitation protocols and release strategies
- Stress reduction and animal welfare practices
- Case Study: Successful dolphin rehabilitation program

Module 4: Marine Pollution and Toxicology

- Sources and types of marine pollutants
- Bioaccumulation and toxic effects on wildlife
- Assessment methods for chemical and plastic pollution
- Mitigation strategies for pollution-related health issues
- Case Study: Oil spill impact on seabird colonies

Module 5: One Health and Ecosystem Approaches

- Integration of human, animal, and environmental health
- Zoonotic disease risks and management
- Ecosystem-based conservation strategies
- Policy frameworks for One Health implementation
- Case Study: One Health approach to coastal mangrove protection

Module 6: Emerging Technologies in Marine Health

- Use of drones, GIS, and remote sensing for monitoring
- Health tracking with telemetry and tagging
- Data management and predictive modeling
- Innovative diagnostic and treatment tools
- Case Study: Satellite tracking of endangered sea turtles

Module 7: Climate Change and Wildlife Adaptation

- Impact of climate change on marine ecosystems
- Behavioral and physiological adaptation of species
- Threats from ocean acidification and temperature shifts
- Adaptation and mitigation strategies
- Case Study: Coral reef bleaching and marine fauna survival

Module 8: Conservation Policy and Community Engagement

- Conservation laws and international frameworks
- Stakeholder collaboration and community programs

- Education and awareness campaigns
- Monitoring and reporting for policy compliance
- Case Study: Coastal community-led marine protection initiative

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$1,500
