

# Panel Data Analysis (Fixed Effects, Random Effects) Training Course

Professional Development Training Course Outline

|          |                            |               |                         |
|----------|----------------------------|---------------|-------------------------|
| Category | Research and Data Analysis | Duration      | 5 Days                  |
| Base Fee | \$1,500 USD                | Delivery Mode | Online / On-site Hybrid |

## Course Introduction

In today’s data-driven world, organizations increasingly rely on advanced econometric techniques to extract actionable insights from complex data. Panel Data Analysis (Fixed Effects, Random Effects) Training Course equips learners with robust tools to analyze multi-dimensional data involving measurements over time. This intensive, hands-on training is designed to enhance skills in regression modeling, fixed effects models, random effects models, and hypothesis testing — all essential for understanding individual heterogeneity and making reliable inferences in business, social sciences, and healthcare research.

The course emphasizes applied econometrics, statistical computing, and longitudinal data modeling using popular software such as Stata, R, and Python. With real-world case studies and practical exercises, participants will master both theoretical concepts and real-world application of panel data techniques. Whether you are a data scientist, policy analyst, or academic researcher, this training will significantly elevate your ability to conduct dynamic and policy-relevant data analysis.

## Programme Curriculum

### Panel Data Analysis (Fixed Effects, Random Effects) Training Course

#### Introduction

In today’s data-driven world, organizations increasingly rely on advanced econometric techniques to extract actionable insights from complex data. Panel Data Analysis (Fixed Effects, Random Effects) Training Course equips learners with robust tools to analyze multi-dimensional data involving measurements over time. This intensive, hands-on training is designed to enhance skills in regression modeling, fixed effects models, random effects models, and hypothesis testing — all essential for understanding individual heterogeneity and making reliable inferences in business, social sciences, and healthcare research.

The course emphasizes applied econometrics, statistical computing, and longitudinal data modeling using popular software such as Stata, R, and Python. With real-world case studies and practical exercises, participants will master both theoretical concepts and real-world application of panel data techniques. Whether you are a data scientist, policy analyst, or academic researcher, this training will significantly elevate your ability to conduct dynamic and policy-relevant data analysis.

### Course Objectives

1. Understand the fundamentals of panel data econometrics
2. Differentiate between fixed effects and random effects models
3. Apply within transformation and first-difference methods
4. Conduct Hausman tests to choose between model types
5. Interpret model coefficients in multi-dimensional data
6. Use robust standard errors to deal with heteroscedasticity
7. Perform dynamic panel estimation techniques
8. Apply models using Stata, R, and Python
9. Address endogeneity and omitted variable bias
10. Conduct policy impact evaluation using panel data
11. Explore unbalanced vs. balanced panel datasets
12. Develop publication-ready analysis reports
13. Master real-time analytics in business and economic research

### Target Audiences

1. Data analysts and data scientists
2. Academic researchers in economics, sociology, and health
3. Government policy makers
4. Economists and market researchers
5. Public health professionals
6. PhD and Master's students
7. Monitoring and evaluation specialists
8. Financial analysts and risk modelers

**Course Duration:** 5 days

### Course Modules

#### Module 1: Introduction to Panel Data

- Definition and structure of panel data
- Types: balanced vs. unbalanced
- Advantages of panel data over cross-sectional data
- Descriptive statistics for panel datasets
- Key challenges in panel data modeling
- **Case Study:** Household Income Dynamics Survey (HIDS)

#### Module 2: Fixed Effects Models

- Assumptions and identification
- Within transformation and demeaning
- Time-invariant variables and limitations
- Model specification in Stata and R
- Testing for fixed effects using F-test
- **Case Study:** Panel analysis of firm productivity

#### Module 3: Random Effects Models

- Assumptions of RE models
- GLS estimation approach
- Interpretation of random intercept
- Comparison with fixed effects
- Estimation in R, Stata, and Python
- **Case Study:** Determinants of bank profitability

#### **Module 4: Model Selection Techniques**

- Hausman test implementation
- Breusch-Pagan Lagrange Multiplier test
- Diagnostic plots and residual analysis
- Impact of correlation across time
- Nested model comparison
- **Case Study:** Educational achievement over time

#### **Module 5: Addressing Endogeneity**

- Sources of endogeneity in panel data
- Instrumental variable approach
- Two-stage least squares in panel models
- Control function approach
- Software-based implementation
- **Case Study:** Wage determination and education

#### **Module 6: Robustness and Assumptions Testing**

- Heteroscedasticity and autocorrelation in panels
- Clustered standard errors
- Testing for multicollinearity
- Serial correlation corrections
- Software-based diagnostics
- **Case Study:** Environmental policy impact

#### **Module 7: Dynamic Panel Models**

- Lagged dependent variables
- Arellano-Bond estimators
- GMM estimation and instruments
- System vs. difference GMM
- Best practices and pitfalls
- **Case Study:** Investment and capital accumulation

#### **Module 8: Reporting and Visualization**

- Summarizing findings with visual tools
- Creating regression tables and graphics
- Generating reproducible scripts
- Writing econometric reports for publication
- Interpreting results for decision-makers
- **Case Study:** Policy brief on rural development

#### **Training Methodology**

- Interactive instructor-led sessions
- Hands-on coding labs in R, Python, and Stata

- Guided case study analysis
- Peer discussion and Q&A forums
- End-of-module quizzes and capstone project

### Register as a group from 3 participants for a Discount

Send us an email: [info@fineskilltrainingcenter.org](mailto:info@fineskilltrainingcenter.org) or call +254769199797

### Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

### Tailor-Made Course

We also offer tailor-made courses based on your needs.

### Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

## Upcoming Scheduled Sessions

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 21 Sep 2026 | 25 Sep 2026 | Online   | \$1,000 |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$1,500 |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0     |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0     |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0     |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0     |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0     |

| Start Date  | End Date    | Location | Price |
|-------------|-------------|----------|-------|
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$0   |
