

Real-Time Building Monitoring Systems Training Course

Professional Development Training Course Outline

Category	Architectural Engineering	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Real-Time Building Monitoring Systems (RTBMS) represent the future of intelligent infrastructure management, integrating IoT sensors, AI analytics, cloud computing, and edge intelligence to continuously track structural health, energy usage, safety compliance, and environmental conditions in modern buildings. Real-Time Building Monitoring Systems Training Course is designed to equip learners with cutting-edge skills in smart building automation, predictive maintenance, digital twins, and real-time data visualization, enabling efficient decision-making and enhanced operational control in commercial, industrial, and smart city environments.

With the rapid growth of smart cities, green buildings, and Industry 4.0 technologies, organizations are increasingly adopting advanced monitoring systems to reduce operational costs, improve sustainability, and enhance occupant safety. This course provides hands-on expertise in BMS integration, sensor networks, SCADA systems, AI-driven anomaly detection, and cloud-based dashboards, preparing participants to lead next-generation infrastructure transformation projects across global markets.

Programme Curriculum

Real-Time Building Monitoring Systems Training Course

Introduction

Real-Time Building Monitoring Systems (RTBMS) represent the future of intelligent infrastructure management, integrating IoT sensors, AI analytics, cloud computing, and edge intelligence to continuously track structural health, energy usage, safety compliance, and environmental conditions in modern buildings. Real-Time Building Monitoring Systems Training Course is designed to equip learners with cutting-edge skills in smart building automation, predictive maintenance, digital twins, and real-time data visualization, enabling efficient decision-

making and enhanced operational control in commercial, industrial, and smart city environments.

With the rapid growth of smart cities, green buildings, and Industry 4.0 technologies, organizations are increasingly adopting advanced monitoring systems to reduce operational costs, improve sustainability, and enhance occupant safety. This course provides hands-on expertise in BMS integration, sensor networks, SCADA systems, AI-driven anomaly detection, and cloud-based dashboards, preparing participants to lead next-generation infrastructure transformation projects across global markets.

Course Duration

10 days

Course Objectives

1. Master Real-Time Building Monitoring Systems (RTBMS) architecture
2. Understand IoT-enabled smart building sensor integration
3. Implement AI-powered predictive maintenance models
4. Develop expertise in cloud-based building management systems (BMS)
5. Apply edge computing for real-time data processing
6. Design energy-efficient smart building solutions
7. Configure SCADA and automation control systems
8. Analyze structural health monitoring (SHM) data
9. Build digital twin models for smart infrastructure
10. Enhance cybersecurity for smart building networks
11. Utilize real-time data analytics dashboards (Power BI/IoT platforms)
12. Optimize HVAC and energy management systems using AI
13. Enable smart city integration and scalable infrastructure monitoring

Target Audience

1. Civil and Structural Engineers
2. Electrical and Mechanical Engineers
3. IoT and Embedded Systems Developers
4. Smart City Planners and Consultants
5. Facility and Building Management Professionals
6. Data Analysts and AI Engineers
7. Construction Project Managers
8. Government Infrastructure and Urban Development Officers

Course Modules

Module 1: Introduction to Smart Buildings & RTBMS

- Evolution of smart infrastructure systems
- Components of real-time monitoring architecture
- Role of IoT in modern buildings
- Overview of automation systems
- Case Study: Smart Dubai Building Initiative

Module 2: IoT Sensors & Device Integration

- Types of environmental and structural sensors

- Wireless sensor network deployment
- Sensor calibration techniques
- Data acquisition systems
- Case Study: Singapore Smart Nation Sensors Deployment

Module 3: Building Management Systems (BMS) Fundamentals

- BMS architecture and protocols
- Integration with HVAC and lighting systems
- Control system design
- Data flow in BMS
- Case Study: Burj Khalifa Intelligent BMS System

Module 4: Real-Time Data Acquisition Systems

- Edge vs cloud data collection
- Sensor-to-cloud pipelines
- Latency optimization techniques
- Data filtering and preprocessing
- Case Study: London Heathrow Airport Monitoring System

Module 5: Cloud Computing for Smart Buildings

- AWS, Azure IoT integration
- Cloud storage architecture
- Scalable data pipelines
- Serverless monitoring systems
- Case Study: Microsoft Smart Campus Project

Module 6: Edge Computing in RTBMS

- Edge device configuration
- Local processing algorithms
- Reducing network latency
- Hybrid cloud-edge systems
- Case Study: Industrial Smart Factory Edge Deployment

Module 7: Structural Health Monitoring (SHM)

- Vibration and stress monitoring
- Crack detection systems
- Structural load analysis
- Real-time alert systems
- Case Study: Golden Gate Bridge Monitoring System

Module 8: AI & Machine Learning in Building Monitoring

- Predictive maintenance models
- Anomaly detection algorithms
- Time-series forecasting
- AI-based energy optimization
- Case Study: Google DeepMind Energy Optimization

Module 9: Digital Twin Technology

- Building digital replication
- Simulation modeling
- Real-time synchronization
- Predictive analytics using twins
- Case Study: Siemens Digital Twin Smart Buildings

Module 10: Energy Management Systems

- Smart energy distribution
- Load balancing systems
- Renewable energy integration
- Consumption analytics
- Case Study: Tesla Smart Energy Buildings

Module 11: HVAC Automation & Optimization

- Smart HVAC control systems
- Temperature and airflow sensors
- Energy-efficient algorithms
- Occupancy-based control systems
- Case Study: Apple Park HVAC Optimization

Module 12: Cybersecurity in Smart Buildings

- IoT security frameworks
- Network intrusion detection
- Data encryption techniques
- Secure device authentication
- Case Study: Smart Hospital Cybersecurity Framework

Module 13: Data Visualization & Dashboards

- Real-time monitoring dashboards
- Power BI / Grafana integration
- KPI tracking systems
- Alert visualization tools
- Case Study: Smart City Control Room Dashboard

Module 14: SCADA Systems Integration

- SCADA architecture overview
- Industrial automation controls
- Remote monitoring systems
- Alarm management systems
- Case Study: Oil & Gas Smart Facility SCADA System

Module 15: Smart City Integration & Future Trends

- City-scale monitoring systems
- Infrastructure interoperability

- 5G-enabled smart buildings
- Sustainability metrics tracking
- Case Study: Songdo Smart City (South Korea)

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Online	\$2,000

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
