

Training Course on Construction Cost Analysis and Management

Professional Development Training Course Outline

Category	Development	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In the evolving landscape of the construction industry, mastering Construction Cost Analysis and Management is critical to achieving project success and financial sustainability. Training Course on Construction Cost Analysis and Management delivers a strategic approach to cost estimation, budgeting, financial planning, and value engineering, empowering professionals to control project costs effectively. Participants will gain expertise in applying advanced cost control strategies, utilizing digital construction technologies, and aligning financial forecasting with project milestones to optimize overall construction outcomes.

With a focus on modern construction management practices, this course integrates real-world case studies, project lifecycle cost analysis, and up-to-date tools such as Building Information Modeling (BIM) and Construction Cost Indexes (CCI). Whether you're a project manager, cost estimator, quantity surveyor, or construction business owner, this course provides the tools and insights needed to thrive in today's competitive market and deliver cost-efficient, high-quality construction projects.

Programme Curriculum

Training Course on Construction Cost Analysis and Management

Course Introduction

In the evolving landscape of the construction industry, mastering Construction Cost Analysis and Management is critical to achieving project success and financial sustainability. Training Course on Construction Cost Analysis and Management delivers a strategic approach to cost estimation, budgeting, financial planning, and value engineering, empowering professionals to control project

costs effectively. Participants will gain expertise in applying advanced cost control strategies, utilizing digital construction technologies, and aligning financial forecasting with project milestones to optimize overall construction outcomes.

With a focus on modern construction management practices, this course integrates real-world case studies, project lifecycle cost analysis, and up-to-date tools such as Building Information Modeling (BIM) and Construction Cost Indexes (CCI). Whether you're a project manager, cost estimator, quantity surveyor, or construction business owner, this course provides the tools and insights needed to thrive in today's competitive market and deliver cost-efficient, high-quality construction projects.

Course Objectives

1. Understand the fundamentals of construction cost analysis.
2. Develop accurate and detailed cost estimates for construction projects.
3. Apply value engineering techniques for cost-saving opportunities.
4. Utilize Building Information Modeling (BIM) for cost forecasting.
5. Master techniques in project budgeting and financial management.
6. Analyze project cash flows and resource allocation.
7. Implement risk assessment in cost planning.
8. Monitor and control construction costs using modern software.
9. Interpret cost reports and implement cost control mechanisms.
10. Learn procurement strategies and cost implications.
11. Understand contract types and their impact on cost management.
12. Integrate sustainable construction methods into cost analysis.
13. Evaluate post-construction cost performance and lessons learned.

Target Audience

1. Project Managers
2. Construction Cost Estimators
3. Civil Engineers
4. Quantity Surveyors
5. Real Estate Developers
6. Construction Accountants
7. Architecture and Engineering Consultants
8. Construction Company Owners and Executives

Course Duration: 10 days

Course Modules

Module 1: Introduction to Construction Cost Management

- Definition and scope
- Importance of cost control

- Types of construction costs
- Overview of cost management cycle
- Key challenges in cost analysis

Module 2: Cost Estimation Techniques

- Preliminary and detailed estimates
- Parametric estimating
- Unit cost method
- Historical cost data
- Factors affecting accuracy

Module 3: Budgeting and Financial Planning

- Budget preparation
- Resource allocation
- Project cost baselines
- Forecasting techniques
- Budget reconciliation

Module 4: Lifecycle Cost Analysis (LCCA)

- Definition and benefits
- Methods and models
- LCCA in design decisions
- Case studies
- Sustainability integration

Module 5: Value Engineering and Optimization

- Concept of value engineering
- Identifying value opportunities
- Function analysis
- Cost-benefit evaluation
- Implementation techniques

Module 6: Cost Control and Monitoring

- KPIs for cost performance
- Earned Value Management (EVM)
- Cost variance analysis
- Reporting tools
- Mitigation strategies

Module 7: Risk and Uncertainty Management

- Risk identification
- Risk quantification
- Contingency planning

- Monte Carlo simulation
- Cost risk register

Module 8: Use of BIM in Cost Analysis

- BIM overview
- 5D BIM and cost modeling
- Integration with estimating tools
- Real-time data tracking
- Software platforms

Module 9: Procurement Strategies and Cost Impact

- Procurement types
- Pricing strategies
- Bidding and tendering
- Vendor selection
- Contractual risks

Module 10: Contractual Cost Implications

- Contract types overview
- Fixed-price vs. cost-plus
- Incentive contracts
- Change orders
- Claims and disputes

Module 11: Construction Economics

- Economic principles
- Inflation and escalation
- Market trends
- Labor and material indices
- Global construction cost index

Module 12: Post-Construction Cost Evaluation

- Final cost reporting
- Lessons learned
- Cost benchmarking
- Performance metrics
- Client satisfaction

Module 13: Software for Cost Management

- Estimation tools
- Project management platforms
- Cost tracking applications
- Integration with BIM

- Hands-on tutorials

Module 14: Sustainable Cost Management

- Green construction economics
- Energy cost analysis
- Lifecycle sustainability
- Carbon cost integration
- Environmental credits

Module 15: Real-world Case Studies

- Residential projects
- Infrastructure works
- Commercial buildings
- Budget vs. actual analysis
- Success and failure factors

Training Methodology

- Interactive lectures
- live case studies
- group projects
- Simulation tools
- Real-time cost analysis
- Quizzes
- Expert guest sessions

Register as a group from 3 participants for a Discount

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.

- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Online	\$2,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
