

Training Course on Data Visualization Libraries for Web GIS (D3.js, Deck.gl)

Professional Development Training Course Outline

Category	GIS	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today's data-driven world, the ability to effectively visualize complex geospatial data on the web is paramount. This course dives deep into **cutting-edge web GIS data visualization** techniques, leveraging the power of **D3.js** and **Deck.gl**. Participants will master the creation of **interactive, high-performance geospatial dashboards** and **immersive 3D web maps**, transforming raw spatial data into actionable insights for diverse industries. We will explore how to build dynamic and engaging visual narratives from large datasets, enhancing **spatial storytelling** and enabling **data-driven decision-making**.

Training Course on Data Visualization Libraries for Web GIS (D3.js, Deck.gl) addresses the growing demand for skilled professionals who can bridge the gap between complex geographical information systems and intuitive web-based experiences. Through practical, **hands-on projects** and real-world **case studies**, attendees will gain proficiency in developing **responsive and scalable web GIS applications**, fostering a deeper understanding of **geospatial analytics** and **interactive mapping**. This course is designed to empower participants to unlock the full potential of their spatial data, contributing to informed strategies and innovative solutions.

Programme Curriculum

Training Course on Data Visualization Libraries for Web GIS (D3.js, Deck.gl)

Introduction

In today's data-driven world, the ability to effectively visualize complex geospatial data on the web is paramount. This course dives deep into **cutting-edge web GIS data visualization** techniques, leveraging the power of **D3.js** and **Deck.gl**. Participants will master the creation of **interactive, high-performance geospatial dashboards** and **immersive 3D web maps**, transforming raw spatial data into actionable insights for diverse industries. We will explore how to build dynamic and

engaging visual narratives from large datasets, enhancing **spatial storytelling** and enabling **data-driven decision-making**.

Training Course on Data Visualization Libraries for Web GIS (D3.js, Deck.gl) addresses the growing demand for skilled professionals who can bridge the gap between complex geographical information systems and intuitive web-based experiences. Through practical, **hands-on projects** and real-world **case studies**, attendees will gain proficiency in developing **responsive and scalable web GIS applications**, fostering a deeper understanding of **geospatial analytics** and **interactive mapping**. This course is designed to empower participants to unlock the full potential of their spatial data, contributing to informed strategies and innovative solutions.

Course Duration

10 days

Course Objectives

1. Gain a comprehensive understanding of D3.js for **data binding, DOM manipulation, and SVG graphics** in web environments.
2. Learn to create **high-performance, GPU-powered visualizations** using Deck.gl for large-scale geospatial datasets.
3. Seamlessly combine the strengths of both libraries for **complex, multi-layered interactive geospatial analytics**.
4. Explore techniques for visualizing **live geospatial data feeds** and dynamic updates on web maps.
5. Focus on principles of **UX/UI design** for creating intuitive and effective interactive map dashboards.
6. Apply strategies for handling and visualizing **massive spatial datasets** efficiently on the web.
7. Understand the underlying technologies driving **accelerated graphics** in modern web GIS.
8. Create bespoke visualization components and extend the capabilities of Deck.gl for unique analytical needs.
9. Learn to communicate insights effectively through compelling **narrative-driven geospatial visualizations**.
10. Understand how to prepare and transform various **GIS data formats (GeoJSON, TopoJSON)** for web visualization.
11. Ensure visualizations are accessible and performant across diverse devices and screen sizes.
12. Integrate D3.js and Deck.gl with popular frameworks like **React or Vue.js** for robust application development.
13. Gain insight into deploying and scaling interactive geospatial applications using **cloud platforms**.

Organizational Benefits

- Empower teams with the ability to quickly derive insights from complex geospatial data, leading to more informed strategic decisions.
- Streamline data analysis workflows and reduce time spent on manual data interpretation through interactive, automated visualizations.
- Facilitate clearer and more engaging communication of spatial insights to diverse audiences, fostering better collaboration and understanding.
- Equip the organization with cutting-edge skills in web GIS visualization, positioning it as a leader in spatial intelligence.

- Leverage powerful open-source libraries (D3.js, Deck.gl) to develop sophisticated solutions without proprietary software costs.
- Foster the creation of new, interactive, location-aware applications and services for clients or internal use.
- Visualize spatial patterns and trends to identify areas for improved resource deployment, logistics, and planning.
- Identify and visualize potential risks or vulnerabilities within geographical contexts, enabling timely mitigation strategies.

Target Audience

1. GIS Professionals & Analysts
2. Web Developers & Front-End Engineers
3. Data Scientists & Analysts.
4. Urban Planners & Smart City Innovators
5. Environmental Scientists & Researchers.
6. Business Intelligence (BI) Analysts
7. Geospatial Data Engineers
8. Students and Academics.

Course Outline

Module 1: Introduction to Web GIS and Data Visualization

- Overview of Web GIS architecture and modern mapping paradigms.
- The importance of data visualization in understanding spatial patterns.
- Introduction to interactive vs. static maps and their applications.
- Exploring the ecosystem of web-based geospatial libraries (D3.js, Deck.gl, Leaflet, Mapbox GL JS).
- **Case Study:** Visualizing global COVID-19 spread with interactive choropleth maps.

Module 2: JavaScript Fundamentals for Web GIS

- ES6+ features essential for modern web development.
- Asynchronous programming (Promises, Async/Await) for data loading.
- Working with JSON and GeoJSON data formats.
- Basic DOM manipulation and event handling.
- **Case Study:** Building a simple interactive button that changes map data.

Module 3: D3.js Core Concepts: Selections & Data Binding

- Understanding D3's philosophy of data-driven documents.
- `d3.select()`, `d3.selectAll()`, and chaining operations.
- The `data()`, `enter()`, `update()`, `exit()` pattern.
- SVG basics for creating visual elements.
- **Case Study:** Creating a dynamic bar chart based on population data, updating with new entries.

Module 4: D3.js Scales, Axes, and Projections

- Linear, ordinal, time, and quantitative scales for data mapping.
- Generating and customizing axes for charts.
- Introduction to geographic projections (`d3.geoPath`, `d3.geoMercator`).

- Drawing basic maps with GeoJSON data and D3.
- **Case Study:** Projecting country boundaries onto an SVG map and adding a legend based on a demographic variable.

Module 5: Advanced D3.js Interactions and Animations

- Adding tooltips and hover effects.
- Implementing zooming and panning for charts and maps.
- Transitions and animations for smooth data updates.
- Brushing and linking multiple visualizations.
- **Case Study:** Developing an interactive timeline visualization linked to a D3 map, showing historical land-use changes.

Module 6: Introduction to Deck.gl: High-Performance WebGL Visualizations

- Understanding the layered architecture of Deck.gl.
- Integrating Deck.gl with base map providers (Mapbox GL JS, Google Maps).
- Overview of common Deck.gl layers (ScatterplotLayer, ArcLayer, LineLayer).
- Working with large datasets and performance considerations.
- **Case Study:** Visualizing taxi trips in New York City with thousands of animated lines using ArcLayer.

Module 7: Deck.gl Layers for Geospatial Data

- PolygonLayer for rendering administrative boundaries and regions.
- GeoJsonLayer for versatile data display.
- HexagonLayer and GridLayer for aggregated spatial data.
- HeatmapLayer for density visualizations.
- **Case Study:** Analyzing urban heat islands by visualizing temperature sensor data using a HexagonLayer.

Module 8: Deck.gl Views and Interactivity

- Configuring different camera views (MapView, FirstPersonView, OrthographicView).
- Adding user interactions: zooming, panning, rotation.
- Picking and highlighting features on the map.
- Filtering data based on user input.
- **Case Study:** Creating a 3D building visualization that allows users to select and view attributes of individual buildings.

Module 9: Combining D3.js and Deck.gl

- Strategies for integrating D3.js charts with Deck.gl maps.
- Passing data between D3 and Deck.gl components.
- Synchronizing interactions between different visualization types.
- Building a composite geospatial dashboard.
- **Case Study:** Developing a real estate dashboard showing property values on a Deck.gl map, with D3.js charts summarizing market trends.

Module 10: Geospatial Data Processing with Turf.js

- Introduction to Turf.js for client-side spatial analysis.
- Performing common GIS operations: buffering, clipping, aggregation.
- Calculating distances, areas, and centroids.

- Simplifying geometries for web performance.
- **Case Study:** Analyzing optimal locations for new facilities by calculating service areas and population densities using Turf.js.

Module 11: Real-time and Live Data Visualization

- Techniques for pushing and pulling live data to web maps.
- Using WebSockets for real-time updates.
- Animating data changes over time.
- Considerations for high-frequency data streams.
- **Case Study:** Tracking live vehicle movements on a Deck.gl map, with color coding based on speed.

Module 12: Building Custom Visualizations and Layers

- Extending existing Deck.gl layers.
- Creating entirely new custom Deck.gl layers using WebGL/WebGPU concepts.
- Developing unique D3.js visualizations for specific data types.
- Leveraging community extensions and plugins.
- **Case Study:** Designing a custom flow map layer in Deck.gl to visualize migration patterns or supply chain logistics.

Module 13: Performance Optimization and Large Datasets

- Strategies for optimizing rendering performance.
- Data simplification and generalization techniques.
- Using binary data formats for faster loading (e.g., Arrow).
- Implementing server-side rendering for large datasets.
- **Case Study:** Optimizing a visualization of millions of sensor points by using data aggregation and efficient rendering techniques.

Module 14: Deployment and Production Best Practices

- Packaging and deploying web GIS applications.
- Version control with Git and GitHub.
- Security considerations for web mapping applications.
- Scalability and maintenance of deployed solutions.
- **Case Study:** Deploying a fully functional interactive web GIS dashboard to a cloud platform like Netlify or Vercel.

Module 15: Future Trends in Web GIS and Data Visualization

- Emerging WebGL/WebGPU features and their impact.
- AI/ML in geospatial data visualization.
- Augmented Reality (AR) and Virtual Reality (VR) in mapping.
- The role of cloud-native GIS and serverless architectures.
- **Case Study:** Discussing the potential for integrating immersive VR experiences with Deck.gl for urban planning simulations.

Training Methodology

This course employs a highly **interactive and hands-on training methodology** to ensure practical skill acquisition and deep understanding.

- **Instructor-Led Sessions:** Engaging lectures and demonstrations covering core concepts and advanced techniques.
- **Live Coding & Pair Programming:** Real-time coding exercises with instructor guidance, fostering collaborative learning.
- **Practical Workshops:** Extensive hands-on exercises and coding challenges for each module, applying learned concepts immediately.
- **Real-World Case Studies:** In-depth analysis and implementation of industry-relevant scenarios, showcasing practical applications.
- **Project-Based Learning:** Participants will develop a comprehensive interactive Web GIS project throughout the course, culminating in a portfolio-ready application.
- **Interactive Q&A and Discussions:** Encouraging active participation and problem-solving through open forums.
- **Code Review and Feedback:** Constructive feedback on participant code to reinforce best practices and identify areas for improvement.
- **Resource Sharing:** Providing access to comprehensive course materials, code repositories, and curated external resources.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Online	\$2,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
