

Waste Management and the Circular Economy Training Course

Professional Development Training Course Outline

Category	Environmental Management and Conservation	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Waste Management and the Circular Economy Training Course offers a comprehensive and **practical guide** to the evolving landscape of **Waste Management** and the **Circular Economy**. Traditional linear models of "take, make, use, and dispose" are no longer sustainable. This training will empower professionals to lead the transition towards a **regenerative** and **resource-efficient** future. Participants will gain the knowledge and skills to implement cutting-edge strategies, **innovative technologies**, and **policy frameworks** that minimize waste and maximize the value of resources. The course is designed to equip you with the expertise to navigate the complex challenges and seize the immense opportunities presented by this global shift.

You will learn to develop **closed-loop systems**, implement **sustainable business models**, and drive **environmental sustainability** while simultaneously enhancing **economic viability**. By mastering concepts like **lifecycle analysis**, **sustainable design**, and **material flow analysis**, you will become a key driver of positive change within your organization and the broader community. This course bridges the gap between traditional practices and the urgent need for a **sustainable, circular future**, positioning you as a leader in this critical field.

Programme Curriculum

Waste Management and the Circular Economy Training Course

Introduction

Waste Management and the Circular Economy Training Course offers a comprehensive and **practical guide** to the evolving landscape of **Waste Management** and the **Circular Economy**. Traditional linear models of "take,

make, use, and dispose" are no longer sustainable. This training will empower professionals to lead the transition towards a **regenerative** and **resource-efficient** future. Participants will gain the knowledge and skills to implement cutting-edge strategies, **innovative technologies**, and **policy frameworks** that minimize waste and maximize the value of resources. The course is designed to equip you with the expertise to navigate the complex challenges and seize the immense opportunities presented by this global shift.

You will learn to develop **closed-loop systems**, implement **sustainable business models**, and drive **environmental sustainability** while simultaneously enhancing **economic viability**. By mastering concepts like **lifecycle analysis**, **sustainable design**, and **material flow analysis**, you will become a key driver of positive change within your organization and the broader community. This course bridges the gap between traditional practices and the urgent need for a **sustainable, circular future**, positioning you as a leader in this critical field.

Course Duration

5 days

Course Objectives

Upon completion of this course, participants will be able to:

1. Understand the core principles and models of the Circular Economy.
2. Implement effective waste prevention and reduction strategies.
3. Master advanced recycling technologies and resource recovery methods.
4. Develop and execute integrated waste management systems.
5. Analyze global and national environmental regulations and compliance requirements.
6. Understand the role of Extended Producer Responsibility (EPR).
7. Apply lifecycle assessment (LCA) tools to evaluate product impacts.
8. Design products and services using Circular Design principles.
9. Utilize data analytics and IoT for waste management optimization.
10. Explore sustainable finance and business models in a circular context.
11. Implement strategies for managing e-waste and hazardous materials.
12. Drive stakeholder engagement and green partnerships.
13. Lead the transition to a regenerative and low-carbon economy.

Organizational Benefits

- By implementing waste minimization and resource recovery programs, companies can significantly reduce operational costs and reliance on virgin materials.
- Demonstrating a commitment to sustainability and the circular economy improves a company's reputation, attracts conscious consumers, and strengthens brand loyalty.
- Proactive adherence to evolving environmental regulations and standards reduces legal and financial risks.
- Creating closed-loop systems and reintroducing materials into the production cycle mitigates risks associated with supply chain disruptions and volatile raw material prices.
- The circular economy fosters innovation in product design, service models, and technology, opening up new markets and revenue streams.
- Offering training on critical, forward-thinking topics like the circular economy boosts employee morale and makes the organization an attractive workplace for top talent.

Target Audience

This course is designed for:

1. Sustainability Managers and Environmental Officers
2. Waste Management Professionals and Recycling Plant Operators
3. Operations Managers and Supply Chain Professionals
4. Government Officials and Policy Analysts
5. Environmental Consultants and Auditors
6. Entrepreneurs and Innovators in the green sector
7. Engineers and Product Designers
8. Corporate Social Responsibility (CSR) Specialists

Course Modules

Module 1: Foundations of Waste Management & the Circular Economy

- Defining the linear vs. circular economy: from "take-make-waste" to a regenerative model.
- Exploring the 3Rs (Reduce, Reuse, Recycle) and the broader 9Rs framework
- Understanding the role of the circular economy in achieving the SDGs.
- Case Study: The Ellen MacArthur Foundation's circular economy initiatives in global business.
- Case Study: A city-level implementation of a zero-waste strategy.

Module 2: Waste Prevention & Resource Efficiency

- Strategies for waste minimization and source reduction at the industrial level.
- Techniques for waste characterization and material flow analysis.
- Implementing Extended Producer Responsibility (EPR) schemes.
- Case Study: Interface's "Mission Zero" initiative and the redesign of their supply chain.
- Case Study: Danone's use of lightweight packaging and refill stations.

Module 3: Advanced Recycling & Resource Recovery

- The science and technology behind **plastics recycling**, including chemical and mechanical methods.
- Exploring **Waste-to-Energy (WTE)**, composting, and anaerobic digestion.
- Managing complex waste streams like **e-waste** and **hazardous materials**.
- Case Study: The use of smart bins and IoT to optimize waste collection routes in a major city.
- Case Study: TerraCycle's business model for recycling "unrecyclable" materials.

Module 4: Circular Design & Innovation

- Principles of **design for disassembly**, durability, and reparability.
- Tools and methodologies for conducting a **Lifecycle Assessment (LCA)**.
- Developing **circular business models** such as Product-as-a-Service (PaaS) and sharing platforms.
- Case Study: Philips's circular lighting business model.
- Case Study: Patagonia's "Worn Wear" program promoting repair and reuse.

Module 5: Policy & Regulation

- An overview of key national and international **environmental legislation**.
- Understanding compliance requirements for **waste disposal** and **emissions**.
- The role of public-private partnerships in driving circular transitions.
- Case Study: The European Union's Circular Economy Action Plan.
- Case Study: The impact of single-use plastic bans on national waste streams.

Module 6: Supply Chain & Reverse Logistics

- Designing and managing **closed-loop supply chains**.
- Implementing efficient **reverse logistics** for product returns and material recovery.
- Techniques for **sustainable sourcing** and material traceability.
- Case Study: HP's use of closed-loop plastics in its products.
- Case Study: Dell's program for recovering and reusing e-waste materials.

Module 7: The Digital & Data-Driven Circular Economy

- Leveraging AI and machine learning for waste sorting and analytics.
- Using blockchain to track materials and ensure transparency in supply chains.
- Exploring the concept of Digital Product Passports (DPPs).
- Case Study: A startup using AI-powered robotics for material sorting at a recycling facility.
- Case Study: The use of blockchain to ensure ethical sourcing of recycled materials.

Module 8: Implementation & Strategic Planning

- Developing a strategic roadmap for an organization's circular transition.
- Creating a business case for circular economy initiatives.
- Measuring and reporting on circularity metrics and ESG performance.
- Case Study: A company that successfully transitioned from a linear to a circular business model.
- Case Study: A community initiative that built a successful local composting and urban farming program.

Training Methodology

This course employs a dynamic and interactive training methodology to ensure maximum engagement and knowledge retention. It will feature a blend of:

- Expert-Led Presentations.
- Interactive Workshops & Group Discussions.
- Practical Case Studies.
- Hands-on Exercises.
- Q&A Sessions.
- Resource Library.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate

- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
